STATEMENT REGARDING DISCUSSION FOR MANDATORY VACCINATION POLICY

What makes Sand City so special is the City has never stepped away from controversial issues that affect everyone in our community. As council members and elected officials, you ALL have the responsibility to protect the citizens against unconstitutional and medical Covid-19 vaccine mandates.

There's a fine balance between individual liberty against encroachments from a person's rights under the 14<sup>th</sup> Amendment to not deprive any person of life, liberty, or property without due process.

In this discussion, NO Covid-19 vaccines are FDA approved but some are authorized under a temporary Emergency Authorization as experimental agents only.

Eighteen months out, we have far more information and data today to better understand Covid-19 which is 78% of Covid I - SARS. Emergency use products are prohibited by federal law 21 U.S.C 360bbb-3 from being mandated. In the case of one vaccine it was approved by the FDA; but not released to the public due to liability issues. Please don't support a vaccine that the very manufacturer won't accept liability for. Ask yourselves why?

Anyone here familiar with the failed mRNA trials from Covid I? The failed trials where the pharmaceutical companies could not achieve FDA approval because; animal trials failed as they died when exposed to Covid in the wild within six months of vaccination.

The CDC Advisory Committee on Immunization Practices (ACIP) affirmed in August 2020 that under a EUA, experimental vaccines are not allowed to be mandatory.

Also the VAERS database is showing substantial risks including death associated with the current vaccines in all age groups and circumstances. Could you live with yourselves if someone you mandatorily required to vaccinate had adverse reaction or worse died?

Please follow the science not the television.

Monterey County's along with other state counties has readily available data citing number of cases, deaths, timelines since Covid-19 began providing real-time and historical details.

Facts regarding our county:

- 1) The general population recovered from Covid at a staggering 99.7% survival rate
- 2) Natural immunity is in fact more effective than vaccination based on the number of people that contracted Covid-19 and survived when compared to deaths (source: Robert Malone MD, Inventor of mRNA)
- 3) Break thru cases are occurring among both groups due to different variants the vaccines cannot detect.
- 4) 76% of the total population is currently vaccination which is staggering when compared to other counties.

Please council members do not mandate or coerce, force, or pressure any person to take an experimental vaccine that's only eight months old. There is only one GOD. Every council member is in control of his or her own health, welfare and life. We didn't vote you into office to take power from us.

We all reserve the right to determine what's in our best interest without our livelihoods, schooling, or freedom being taken away. NONE of you are medically trained to betray the trust of your constituents; you're elected officials.

**This will wake up a sleeping community!** Every person deserves to have their freedoms granted under the Constitution. As a public entity you must abide to federal medical privacy laws (HIPPA) which protect patient's privacy.

As a member of the Sand City City Council this decision cannot be made by you, that in this humble opinion would be wrong and a battle with your community will potentially in sue. Bottom-line, no one wants that.

Thank you for your time.
